ACKNOWLEDGEMENT

We wish to express our gratitude and sincere thanks to our *big brother* and *main supervisor*

Dr. Khalid Hosny Ibrahim

Electrical Power and Machines Department

For his constant encouragement, guidance and support. His ideas and suggestions were helpful for timely accomplishment of the target aimed.

We would like also to express our gratitude and appreciation to all the *professors*, *teachers* and the *assistance teachers*, specially *Eng. Ahmed Farhan*, *Eng. Ahmed Osama* and *Eng. Mokhtar Saeed* For the help and guidance they provided throughout our education.

We wish to express our gratitude towards our *parents* for keeping faith in our abilities and encouraging us to improve at every step.

ABSTRACT

Assessment of power transformer conditions has become increasingly important in recent years. As an asset that represents one of the largest investments in a utility's system, detection of incipient faults in power transformers is crucial.

Dissolved Gas-in-oil Analysis (DGA) is a successful technique to detect these potential faults and it provides wealth of diagnostic information. This project used two DGA methods which are Rogers Ratio and IEC Ratio to interpret the DGA results. However, there are situations of errors and misleading results occurring due to borderline and multiple faults.

Also among all the diagnostic approaches, Sweep Frequency Response Analysis (SFRA) is a powerful and highly sensitive diagnostic method. In this work, for the purpose of analysis of deformation on the transformer winding, a benchmark winding is considered which has already been validated for experimental studies.

Intelligence tools are used to get the type of the faults in transformers. The results explain the validation of software to detect the fault in transformer. Fuzzy logic is implemented here as an improved (DGA) and (SFRA) interpretation methods that provides higher reliability and precision of fault diagnosis.

CONTENTS

ABSTRACT	iii
CONTENTS	iv
CHAPTER I: Introduction	
1.1 Problem Visualization.....	1
1.2 Types of Transformers Faults.....	2
1.3 DGA.....	3
1.4 SFRA.....	3
1.5 Objective of Project.....	4
1.6 Steps of Project.....	4
CHAPTER II: Background	
2.1 DGA as a Diagnostic Tool for Detection of Transformer Faults.....	5
2.1.1 Classical Methods to Diagnose Transformer Faults.....	6
2.1.1.1 Key gases method.....	6
2.1.1.2 Dornenburg ratio method.....	9
2.1.1.3 Roger's ratio method.....	9
2.1.1.4 IEC Ratio.....	10
2.1.1.5 Duval triangle method.....	10
2.1.2 Decision Tree as an Expertise Method.....	11
2.2 SFRA as a Diagnostic Tool for Detection of Winding Deformation.....	13
2.2.1 Short Circuit Forces.....	13
2.2.1.1 Radial Forces.....	15
2.2.1.2 Axial Forces.....	16
2.2.2 Finite Element Method (FEM) modeling of a transformer.....	17
2.2.2.1 An Example of Study of Axial Deformation through FEM Modeling.....	20
2.3 Artificial Intelligence Applications.....	23
2.3.1 What is Artificial Intelligence?.....	23
2.3.2 Agents.....	23
2.3.3 The Agent and the Environment.....	23
2.3.4 World Model.....	24
2.3.5 Agent Design.....	25
2.3.6 Rationality.....	25
2.3.7 Limited Rationality.....	25
2.3.8 Issues.....	25
2.3.9 Thinking.....	26
2.3.10 Learning.....	26
2.3.11 Classes of Environments.....	26
2.3.12 Planning Agent Policy.....	27

2.4 Artificial Intelligence Tools.....	28
2.4.1 Genetic Algorithm.....	28
2.4.2 Artificial Neural Network.....	29
2.4.2.1 Relationship between Artificial Neural Networks and the Human Brain.....	29
2.4.2.2 Network Architecture.....	29
2.4.2.3 Network Training.....	31
2.4.2.4 Supervised Learning.....	32
2.4.2.5 Unsupervised Learning.....	33
2.4.3 Fuzzy Logic.....	34
2.4.3.1 What Is Fuzzy Logic?	34
2.4.3.2 Why Use Fuzzy Logic?	35
2.4.3.3 Fuzzy Sets and Membership Functions.....	36
2.4.3.4 Fuzzy Inference System.....	41
2.4.3.5 Fuzzy Inference Process.....	45
CHAPTER III: Fuzzy Logic Application in Dissolved Gas Analysis (DGA)	
3.1 Introduction.....	47
3.1.1 Dissolved Gas Analysis.....	47
3.1.2 DGA Methods to Classify Fault Type in Power Transformer.....	48
3.2 Methodology.....	49
3.2.1 Fault Gas Analysis.....	49
3.2.2 DGA Interpretation Methods.....	50
3.2.2.1 Roger’s Ratio.....	51
3.2.2.2 IEC Ratio.....	53
3.3 Fault Classifications.....	55
3.3.1 Diagnosis Based on Direct Matching.....	55
3.3.1.1 Diagnosis without Using Weighting Factors.....	55
3.3.1.2 Diagnosis Using Weighting Factors.....	58
3.3.2 Diagnosis Based on Fuzzy Logic Application.....	61
3.3.2.1 Fuzzy Roger's Ratio.....	61
3.3.2.1 Fuzzy IEC Ratio.....	64
3.4 Program Results.....	70
3.4.1 Diagnosis Based on Direct Matching.....	71
3.4.2 Diagnosis Based on Fuzzy Logic Application.....	72

CHAPTER III: Fuzzy Logic Application in Sweep Frequency Response Analysis (SFRA)

4.1 High Frequency Modeling of Power Transformer.....	73
4.1.1 Winding under Test.....	74
4.1.2 Frequency Response Characteristics of 10 Section and 20 Section Models.....	77
4.1.2.1 10 Section Model.....	78
4.1.2.2 20 Section Model.....	80
4.1.3 Application of SFRA on the Healthy Winding.....	82
4.2 Parameter Calculations.....	84
4.2.1 Modeling of Helical Coil Using FEM.....	84
4.2.1.1 Self and Mutual Inductance Calculations.....	84
4.2.1.2 Series Capacitance Calculations.....	85
4.2.1.3 Ground Capacitance Calculations.....	86
4.2.2 Radial Deformation.....	87
4.2. 2.1 First Section Radially Deformed.....	87
4.2. 2.2 Second Section Radially Deformed.....	87
4.2. 2.3 Third Section Radially Deformed.....	88
4.2. 2.4 Fourth Section Radially Deformed.....	88
4.2. 2.5 Fifth Section Radially Deformed.....	88
4.2.3 Axial Deformation.....	89
4.2. 3.1 First Section Axially Deformed.....	90
4.2. 3.2 Second Section Axially Deformed.....	90
4.2. 3.3 Third Section Axially Deformed.....	91
4.2. 3.4 Fourth Section Axially Deformed.....	91
4.2. 3.5 Fifth Section Axially Deformed.....	91
4.3 Location and Type of Deformation.....	92
4.3.1 SFRA Application for Deformation at Different Locations.....	92
4.3.2 SFRA Results.....	93
4.3.2.1 Radial Deformation.....	93
4.3.2.2 Radial Deformation.....	99
4.3.3 Observations.....	105
4.3.3.1 Radial Deformation.....	106
4.3.3.2 Radial Deformation.....	108

4.4 Detection of Location and Type of Deformation Based on Fuzzy Logic	
Application.....	111
4.5 Program Results.....	113
CONCLUSION	117
APPENDIX	
A.1 DGA Coding.....	119
A.1.1 Diagnosis Based on Direct Matching.....	119
A.1.1.1 Roger’s Ratio.....	119
A.1.1.2 IEC Ratio.....	122
A.1.2 Diagnosis Based on Fuzzy Logic Application.....	125
A.1.2.1 Fuzzy Roger’s Ratio.....	125
A.1.2.2 Fuzzy IEC Ratio.....	128
A.2 SFRA Coding.....	130
A.2.1 Frequency Response Characteristics.....	130
A.2.1.1 10 Section Model.....	130
A.2.1.2 20 Section Model.....	132
A.2.2 Detection of Location and Type of Deformation Based on Fuzzy Logic	
Application.....	135
