**Abstract:**

This paper aims to study and publish a new collection of metal artifacts that can be attributed to Iran in the Safavid era, dated to (907-1148 AH/ 1502-1736 AD), Preserved at the Naryn-Kala fortress Museum in Derbend, Republic of Dagestan. This collection includes various forms of metal artifacts, such as: jugs, bowls, and pots.

This study points to date these metal artifacts by reading the recorded writings, incised on it; of which included the manufacture of the masterpiece date, as well as, deducing and measuring the comparative similarities of this collection with some contemporary Safavid artifacts; in terms of form, in addition industrial and decorative style.

This collection was also distinguished by the multiplicity of its industrial styles in addition to its decorative methods, not only that, but also, it was unique in executed decorative elements richness, of which varied between the

inscriptions incised in Persian and Arabic. We conclude diversity of its contents, including Recorded inscriptions, supplicative and Shiite phrases, and Persian poems. Moreover, some phrases by which refer to the functions of artifacts and materials of industry, as well as various plant decorations. Not only that, but also various geometric shapes, and pictorial scenes that included animal drawings. Finally, these directly related with the characteristics of Safavid art.
