

Ph. D Abstract

Scientific Progress

Between Continuity and Discontinuity

Study In the Concept Of Epistemological Rupture

By:

Khaled Ahmed Mohammed Qutb

2000

Epistemological Rupture is one of contemporary concepts in the philosophy of science ,it shows the nature of scientific progress in its radical meaning, and this concept ,itself, made the philosophers of science tend the progress of science through its history, so the contemporary philosophers of science made account of history of science and deal with important epistemological problematic which can be summarized in this question: How did the science advance through its history, Is this progress continually or discontinually?
