

The Political Dimensions of Scientific Practice: Biology as a Model

Study in the political philosophy of science.

Khaled A. Qutb

Science plays an important role in our world. It behinds most of the development and progress in the life of people and nations. It effects on the social, political, cultural and scientific affairs. Science is the fundamental force which structures the present and the future of the people. The consider with science does not mean isolate it from the social, political, economical, and cultural context which it has been raised in. usually this context is the background which guide the scientists in the scientific community.
