

## **The Strong Program in Sociology of Science**

### **Study in the David Bloor's Philosophy of Science**

**Khaled A. Qutb**

Philosophers of science in the last third of Twentieth century introduced a new program to philosophy of science. The science in this program became a tool for develop the society itself. This led to a new branch in the philosophy of science called sociology of science. The critical approaches come from the philosophers of science in this decade helped to emerge this new branch because they realized that there are many dimensions not related to science in its traditional sense, but they(dimensions) guide the science and scientists, I mean the social dimensions.
