### Abstract:

This research aims to identify the nature of cyber bullying and analyze the social theories that explain it, in order to identify the reality of cyber bullying and its coping mechanisms among university students (Fayoum University Case Study). The research was based on some theories of cyber bullying, which were: the perspective of ethnic aggression or relational violence, the cognitive emotional deficit perspective, the power perspective and the control model, and the perspective of public pressure. The results of this research represented in: the positive aspects of the students' use of social

networks, such as the exchange of information and lectures on the courses, and these pages allowed the freedom of expression and the development of some positive values, but the research monitoring some of the negative aspects of breaking many of the accepted standards, The study recommended the need to: develop a more respectful university culture, especially respect for each other's gender, and the participation of the university community in a clear policy against cyber bullying, and to encourage students to participate in student activities that support social ties, the provision of support services to victims of cyber bullying through support groups, and training students and faculty members on the procedures to be followed when a cyberbullying occur.
