

## **Social problems for workers quarries and dealt with from the perspective of the general practice of social service**

### **Study Problem**

Man is the ultimate goal of development and its maker and then the social welfare of the fundamental rights and at the same time is the entry point for the development of its energy and its potential to reach the most that can be accessed and employ these energies and capabilities in the areas of human action Hence achieved integration between social development and economic development as two sides of the coin It is one of development

There are many reasons that may lead to accidents, including what the circumstances, plant and equipment within the plant any unsafe conditions, including what is due to the same factor because of the failure to follow safety conditions at work and the accidents leading to injuries as workers.

And social service professions more interest in working with the human factor understands their needs and work to satisfy them and help to solve problems and to create programs and services that develop character and raises the level of his performance for his role in the factory. Hence Social Work and play have become the need of the inevitability of social services is no longer a luxury or a charity or kindness.

It is clear from the foregoing that the Social Service has a role with the workers in general and the workers who are working in hazardous business in particular

The quarry workers of unstable employment must regulate health and safety in the workplace and know the regulations to get to know the effectiveness of

these systems in improving occupational health and safety of the work environment

### **Questions of the study**

And determined study the problem in a major question what the effect of social problems for workers quarries and dealt with from the perspective of the general practice of social service to confront them

Branching off from the main sub-questions to ask the following :
