

A proposed program to develop the technical skills of social workers working in the field of youth care

Abstract:

The social work profession is concerned with the development of areas of practice in general, as it is considered one of the most professions that seek and focus its activities towards serving and developing institutions, in a desire to reflect this on providing effective services to citizens, and this goal is achieved either by developing the institution or by developing and developing the institution's employees because they are part and an important human element of its elements, and for this reason the practice of social service has become a necessity due to the excessive pressures facing societies as a result of the continuous changes, whether demographic or economic. Or technological this is in addition to the constant change in social needs widely

Professional skills are important foundations in the professional practice of social work and the success of the specialist in his work depends on the extent of his skills in the practical application of the cognitive and value foundations of the profession, and it also helps the specialist to be aware of the feelings of those who work with them, as well as distinguish between feelings associated with the situation, and not associated with it, and also help to understand and realize the factors of awareness and unawareness in human behavior, so the current research came A proposed program for the development of techno-professional skills for working social workers In the field of youth welfare at Fayoum University, which numbered (77),The study found a number of technical and technological skills necessary for social workers in the field of of youth welfare and also found the difficulties of applying the techno-professional skills of social workers in the field of of youth welfare and the study ended with a proposed program to develop the techno-professional skills of social workers working in the field of youth welfare
