Firstly : A problem of the study :

State exert great efforts to advancement of women to be a major system in progress and development, but many of studies and researches showed the violations that committed against woman as inbreeding and forcing woman to marry one of the family members or from who they see appropriate . This is regarding of right of choose a life partner in addition to problems resulted of marriage.

General practice in social work as an overall perspective of practice used with many community problems and phenomenon to prevent it, so researcher chose this study and determinate the current study problem in (Social work intervention by general practice to develop awareness of brides about dangers of inbreeding.

Secondly : study aims :

Test the effectiveness of intervention program from general practice perspective to develop awareness of brides about dangers of inbreeding.

And this aim achieved by **sub-aims** :

١- Test the effectiveness of intervention program from general practice perspective to develop awareness of brides about health dangers of inbreeding.

٢- Test the effectiveness of intervention program from general practice perspective to develop awareness of brides about social dangers of inbreeding.

٣- Test the effectiveness of intervention program from general practice perspective to develop awareness of brides about community dangers of inbreeding.

Thirdly: study hypotheses :

The major hypotheses :

There are positive relation between applied an intervention and awareness of brides about dangers of inbreeding . This ypothes measured by these following **sub- hypotheses** :

- ١- There are positive relation between intervention program and awareness of brides about health dangers of inbreeding .
- ٢- There are positive relation between intervention program and awareness of brides about social dangers of inbreeding .
- ٣- There are positive relation between intervention program and awareness of brides about community dangers of inbreeding .

fourth: Study procedures :

A-Study type : This study blong to experimental studies .

B-Methodology : experimental method which depended on scientific method steps.

C-Study tools :

- An open interview .
- A measurement of awareness of brides about dangers of inbreeding .

Fifth : study fields :

- ١- Place field : community development association at west Snro village.
- ٢- Human field : sample of brides in Literacy classes.
- ٣- Time field : from May ٢٠١٣ to March ٢٠١٤ .

seventh : study results :

Study results proved the validity of the major hypothes and sub-hypothes .
