## Summary of the study

Poverty is a serious social phenomenon of multiple dimensions that is closely linked to development, as reducing or reducing poverty is a goal around which societies and states do not differ. Poverty is a clear product of the political, economic and social changes that have evolved over time by responding to them or Control it, As a result of the complexity of the living conditions of the poorest families in the most care, they are severely deprived of services, programs and social and economic projects and not benefit from them, where the human needs vary and vary according to the urban and cultural differences that make up these needs as well as vary. How to satisfy it from one community to another The need to assess the needs of foster families in informal communities was to be used in effective planning aimed at providing the necessary programs and services to satisfy them. Hence the problem of the current study in( **assessing the needs of the first-carers in the informal communities as a planning indicator to satisfy them** )

The current study aimed at identifying the economic, educational, health, social and recreational needs of the most caring families in informal communities, while identifying the obstacles to satisfying them.

The study found in its results that poor families are more well-cared for (study sample) suffer from many economic, educational, health, social and recreational needs, and the study found a set of obstacles that prevent the satisfaction of these needs, as the study presented to a group of Proposals that can contribute to effective planning to meet these needs
