## **Search Summary**

Social protection represents an investment in human capital in both social and economic development, and for states and their peoples, social protection is not only a matter of entitlement and responsibility, but also a question of rights, where social protection has become one of the basic components of an integrated and comprehensive social policy.

Despite the increase of social units in Egypt, and their efforts in various areas to achieve social protection, social units are still expected to play a more active role in the issue of social protection for the poor, vulnerable and marginalized, but they face many difficulties in applying social protection programs, hence the current study entitled: A proposed planning vision to reduce the obstacles to the application of social protection programs in urban social units.

The study was aimed at identifying the obstacles facing urban social units in their application of social protection programs and reaching a proposed planning vision to reduce these obstacles. In its findings, the study found a range of legislative and regulatory constraints as well as barriers related to beneficiaries that limit the application of social protection programs in urban social units

The current study also found a proposed planning scenario to reduce the constraints of the application of social protection programs in urban social units.
