

Towards building a planning model for community solidarity work in slums

Abstract

The aim of this study was to reach the parameters of a schematic model for community-based solidarity work in slum areas, this main aim is divided into several sub-goals :

- To measure the ability of slum dwellers to build local knowledge.
- To measure the ability of slum-dwellers to make decisions relevant to their communities.
- To measure the ability of slum dwellers to practice social accounting.

In order to achieve these objectives, a community solidarity action barometer was constructed, which was distributed to a random sample of about 258 persons of the population of the fayoum district of " AL Saha ".

The study concluded that the importance of improving the services provided to the residents of AL Saha area in order to guarantee their right to development, The importance of the participation of the residents of Al Saha area in the development of their region is a decisive variable in the success of development planning processes, as well as the importance of devoting creative efforts and resources to combat poverty, Also, it is imperative to participate in various societies.

Keywords: "community solidarity work - slums - community accounting - building local knowledge.
