

## **Abstract (4 )**

The role of the university in developing students' future foresight skills

A field study on a sample of Suez Canal University students.

It is accepted to be published in the Scientific Journal of the Faculty of

Arts, Assiut, Issue 84, October 2022

Prepared by : Dr. Mohamed Ibrahim Ibrahim Mabrouk

Sociology teacher - Faculty of Social Work  
Fayoum University

The rapid changes that the world is witnessing at the present time constitute part of the threats and challenges facing university students in all societies of the world, which requires the university to play its role in developing the skills of the students enrolled in it. Starting from a main question: To what extent does the university contribute to the development of the future foresight skills of its students?

To answer this question, the study relied on the sample social survey method. A questionnaire was applied to a sample of Suez Canal University students, consisting of (480) students from different faculties of the university. The study concluded that the university contributes to the development of future foresight skills for its students, and that these skills are: the skill of imagination, future thinking, problem-solving skill, and the skill of scientific prediction.

Keywords: university - skill - foreseeing the future
