

"tears"
Research field

**The morphotypes of eye tears with microscopic vision as an
introduction**

creative photographic works

- Introducing new approaches to link art and science by taking advantage of the tremendous progress and development in the field of technology and modern scientific discoveries in enriching the sources of artistic and visual vision.
- The importance of the research lies in discovering new sources and entrances (for microscopic shapes and cells), which could be the nucleus of multiple breakthroughs in this field.
- Allowing for an innovative plastic vision that did not exist before, which had a clear impact on the diversity of the artistic production of the pictorial painting.
