Title: Drawings as a Projective Means to Reduce Aggressive Behavior among a Sample of Female Orphanages in Adolescence

Supervisor Name:

Dr. Abla Hanafi Othman

Dr. Asmaa Mohamed Abdel Hamid

Research Summary

Research objectives

1- Determining the causes of aggressive behavior among adolescent females in orphanages.

2- Measuring the effect of Drawings as a Projective Means to Reduce Aggressive Behavior among a Sample of Female Orphanages in Adolescence

Research importance

The importance of the research is summarized as follows:

- The research provides adolescent females in orphanages with better adaptation and a stable psychological life to reduce psychological conflicts and stress.

Research hypotheses

There are statistically significant differences in reducing the average degree of aggressive behavior among Female Orphanages in Adolescence before and after applying fees in favor of post performance.

The research answers the following question:

What is the effect of drawings as a Projective Means to Reduce Aggressive Behavior among a Sample of Female Orphanages in Adolescence,

Chapter Two: Theoretical Framework of the Research:

The research is divided into five chapters distributed as follows:

The first chapter: the general framework of the research: It includes the of the research introduction, the research problem, the research objectives, the research importance, the research hypotheses, the

research limits, the research methodology, the research steps, and the research terms.

The second chapter: The theoretical framework: The theoretical framework includes four main axes: The first topic: Drawings, The second topic: projection, The third topic: aggressive behavior, The fourth topic: Female Orphanages Adolescence

Chapter Three: literature review: This chapter includes literature review related to the research topic.

the fourth chapter

It includes (research methodology - research tools - research procedures and statistical treatments - study sample- Building a program through Drawings as a Projective Means to Reduce Aggressive Behavior among a Sample of Female Orphanages in Adolescence (the objectives of the therapeutic program - the foundations of building the program - the techniques used in the program - the materials and tools for artistic expression - the teaching aids used - the content of the program).

Research results

There are statistically significant differences in reducing the average degree of aggressive behavior among Female Orphanages in Adolescence before and after the application of fees in favor of post performance.
