

The aesthetic potential to recycle a men's shirt to make home furnishing

Abstract

men's shirt is one of the basic pieces of clothing for men, and its lines, colors and materials have vary according to style, so many of them became unfashionable with out using them,and which prompted the researcher to take advantage following question: What is the possibility of recycling men's shirts to implement home furnishings? Taking into account the aesthetics of the lines of the men's shirt designs, and its different colors and materials.The objectives of the research were to provide products that meet the desires and needs of consumers in terms of aesthetics, function and economy, to rationalize spending on the purchase of home furnishings by recycling men's shirts, Knowing how to transform used or fashionable pieces into products of utilitarian and aesthetic value. The researcher implemented nine home furnishings products, "pillows", and the research followed the applied approach by recycling men's shirts into home furnishing products. One of the research tools is to make a questionnaire for the opinions of specialists to get acquainted with their opinions about the implemented products regarding the possibility of achieving the aspects (aesthetic - functional - economic), a questionnaire for the opinions of consumers "the target group. The results of the research resulted in the acceptance of both specialists and consumers of the products. In light of the evaluations of each of them, the study recommends conducting more scientific research to develop the innovative side of home economics

students based on recycling leftover fabrics and holding seminars and workshops to increase awareness of the importance of recycling spent clothes because of its importance in increasing the material return and preserving the environment.
