Medial vermilion augmentation in unilateral cleft lip repair by lateral vermilion flap

Egyptian journal of plastic and reconstructive surgery
July 2011
Vol.35 no 2 pp 313-315

Abstract

In this study we reviewed vermilion reconstruction during the unilateral cleft lip repair. A series of 15 cases with unilateral cleft lip either complete or incomplete were treated using the lateral vermilion triangular flap technique to ensure vermilion augmentation resulted in good approximation of both medial and lateral sides.
