### **Abstract**

In the first part of this paper, we mention some errors in Communications in Algebra, DOI:10.1080/00927872.2019.1684510, and give a correct version of the errant results. In the second part, we generalize some results in Communications in Algebra (DOI:10.1080/00927872.2016.1274900) and present our contribution in the study of generalized two-sided  $\alpha$ -derivations satisfying certain identities over near-rings.
